Ingredients in NanoKine Option™ are a novel: very potent immune enhancing and modulating, patented 7X homeopathic preparation, with additional patents pending.

This ultra-potent NanoKine Option™ has been diluted, potentized and prepared according to accepted homeopathic practices. One to ten drops per day is taken under the tongue. Each dose contains 333 nanograms of active ingredients, a single drop contains over a trillion molecules (about 1,000,000,000,000,000 molecules) but is still less than one-millionth the dose of traditional pharmaceutical drugs.

NanoKine Option™, a small organic molecule with molecular weight of 724, is a chemical combination of the nutrient taurine and a derivative of the amino acid alanine.

Taurine is an important nutrient in the development and support of brain and retinal tissue while alanine is a portion of Vitamin B5.

The molecule in NanoKine™ Option activates, strengthens and modulates, or adjusts, the patient's immune defense system to combat a number of specific immune related ailments, (e.g. fatigue, allergies, colds and flu).

Initial use of ingredients in NanoKine Option™ produced allergy reduction and simultaneously reduced fatigue, even in patients with chronic fatigue (CFS), and potentially fatal Hepatitis-C (HCV). HCV viral count was also reduced. There are an estimated 4 million people in the U.S. with HCV, which currently has no non-toxic or reproducibly effective therapy.

NanoKine Option™ has shown a significant response rate in clinical trials for the reduction of symptoms in chronic fatigue and fibromyalgia: an average rate of 80% after 4 weeks of use and 90% after 5 weeks. Ingredients in NanoKine Option™ Eliminated cancer cells in several animal studies:

- **80% survival**, for mice injected with myeloma cancer cells; all untreated mice died.
- **70% survival**, for mice injected with melanoma cancer cells; all untreated mice died.
- **Ongoing survival** - 2 dogs with terminal cancer (fibrosarcoma, T-cell lymphoma).

The dog with fibrosarcoma was given 6 months to live (9/00). As of 4/02, the dog is alive, 13 months beyond original prognosis. The dog with T-cell lymphoma is reported to have greater quality of life, better than expected liver enzymes and less than expected progression of disease.

Following is a summary of research conducted on the mechanism of action, effectiveness and safety in animal studies and effectiveness and safety in human trials:

Contents

Carboxybenzoxy-beta-alanyl-aurine 7X

Other Ingredients: Reversed Osmosis Water (80%), Natural Ethanol (20%)

Suggested Use:

3 drops 2-times per day, Sublingual

Warning: Keep this and all medicines out of the reach of children. In case of accidental overdose contact Physician or Poison Control Center. As with any drug if you are pregnant or nursing seek the advice of a health professional before using this product.

In extensive cell research it was determined that ingredients in NanoKine Option™ modulate the immune system in a manner conducive to fighting disease. It was deduced that the in-vivo mechanism of action of NanoKine Option™ might be through T-cell activation leading to increased cytokine production. It was found in vitro that:

1. Ingredients in NanoKine Option™ activates T-cells, increasing intracellular calcium, CD 69 expression and Peripheral Mononuclear cells in culture.
2. Ingredients in NanoKine Option™ stimulates tumor necrosis factor (TNF-alpha) and interferon gamma.
3. Ingredients in NanoKine Option™ mediated presence of surface TNF-alpha killed HL60 tumor cells.
